

Patient Name:	John Doe	Registered Date:	21-Aug-2026 08:30 AM
Age / Gender:	34 Y / Male	Reported Date:	21-Aug-2026 02:00 PM
Referred By:	Dr. Sarah Jenkins, MD	Sample Type:	Serum (Fasting)

THYROID PANEL / PROFILE

Test Description	Result	Units	Reference Range	Status
Thyroid Stimulating Hormone (TSH)	0.05	uIU/mL	0.45 - 4.50	LOW
Free Triiodothyronine (FT3)	6.8	pg/mL	2.0 - 4.4	HIGH
Free Thyroxine (FT4)	3.1	ng/dL	0.8 - 1.8	HIGH

Clinical Interpretation & Notes

Note: The lab profile indicates Primary Hyperthyroidism (Overactive Thyroid). A suppressed TSH level combined with elevated levels of Free T3 and Free T4 is typical for conditions such as Graves' disease, toxic multinodular goiter, or thyroiditis. Clinical correlation with symptoms (e.g., tachycardia, weight loss, anxiety) and an ultrasound or radioactive iodine uptake scan may be indicated.
